

In class this week we discovered that acids and alkalis can neutralise each other. Chemists make use of the neutralisation reaction in many ways.

For this homework assignment your task is to produce an information poster or leaflet that illustrates the everyday uses for acids and alkalis. The following is a list that will help you.

- treating bee stings
- treating wasp stings
- treating indigestion
- in soil treatment for gardening
- in hair and skin care
- living things and acids

(nettles, ants and humans use acids)

Your poster should have a heading, introduction and have your name and date. You can work in pairs.
